

# UNDERSTANDING AND INFLUENCING STUDENTS' BEHAVIOUR IN THE DEMOCRATIC REPUBLIC OF THE CONGO

THIS LEARNING REPORT WAS PRODUCED BY AND FOR  
CENTRE DE RECHERCHE SUR L'ANTI-CORRUPTION

FEBRUARY 2022

# EXECUTIVE SUMMARY

As part of the Education Out loud funded Year Zero project, the Centre de Recherche sur l'Anti-Corruption has conducted a study on their Integrity Club model in the South-Kivu and Kinshasa (in the Democratic Republic of the Congo), looking into effective delivery models and mapping the actors that need to be involved for successful implementation and community buy-in.

This research was designed to complement the 4E approach to understanding and influencing behaviour: **ENABLE, ENCOURAGE, ENGAGE** and **EXEMPLIFY**, with research questions reflecting these themes. Qualitative research was utilised to investigate the motivators and barriers to becoming a monitor, including possible incentives. A literature review enabled the findings from the field to be situated within behaviour change theories, compared with similar research and put the overall work in perspective.

## KEY FINDINGS

The key findings emerging from the data for South-Kivu and Kinshasa are given below with high-level recommendations (more detailed recommendations are shown in Table 4). These are categorised according to the 4Es.

### ENABLE - REMOVING BARRIERS AND ENSURING ABILITY TO ACT

- Youth recognise the importance of integrity and are motivated to improve the society in which they live and the schools in which they are taught. However, it is acknowledged that the rate of change will be slow in communities with strong traditions and that collective effort will be required compared to an individual.
- The opportunity for personal development acts as a motivating factor for becoming a monitor. Participants have acquired new knowledge and skills to tackle integrity-related issues such as corruption by participating in Integrity clubs.
- Monetary compensation is a strong motivator for taking part in monitoring activities. This is particularly the case for youth from more disadvantaged backgrounds and who consider monitoring as more of a job rather than volunteerism.

- Participating youth monitors face a number of barriers that prevent effective monitoring. These include time-consuming travel, lack of equipment, food, shelter, and limited authority and access to information.
- Fear is a key barrier amongst youth in DRC, particularly older and female. They fear being targeted for their work, sexually harassed, and abused.

## **ENCOURAGE – PROVIDE INCENTIVES AND DISINCENTIVES, UNDERSTAND AND OFFER THE BENEFITS TO CHANGE**

- In schools with active focal teachers and supportive headteachers, the climate for monitoring is positive, and there is some engagement in extracurricular activities organised by the Integrity Clubs. Confidence levels and awareness of civil rights have increased for youth involved in monitoring activities.
- CERC has provided some support; however, this is considered inadequate in frequency and content. This has acted as a demotivating factor and, in some cases, contributed to the loss of trust.
- Lack of family support remains a challenge, particularly for youth from more financially disadvantaged backgrounds. However, when families had attended sensitisation sessions, they were more likely to support monitoring activities.
- Competing school priorities and a lack of time are also factors that deter students from volunteering their time.

## **ENGAGE - INVOLVING PEOPLE IN COMMUNITIES EARLY ON SO THAT THEY UNDERSTAND WHAT THEY NEED TO DO**

- There is a lack of political engagement, whereby local political representatives lack the commitment to the activities undertaken by the youth. This is linked to low engagement from the project leads of the projects the youth are monitoring and from community members. Low engagement affects the motivation levels of monitors considerably, and the low prioritisation of monitoring acts as a deterrent to non-monitors.
- Within the school Integrity Clubs, there were complaints of low attendance, immaturity, and low engagement of youth, particularly over a long period. This loss in the momentum of the groups can be attributed to a number of factors, including low peer engagement, low teacher engagement and low levels of engagement from partner organisations.

## **EXEMPLIFY - AUTHORITIES ARE INSTITUTIONALISING OPEN BENEFICIARY FEEDBACK, AND INTEGRITY CLUBS ARE RUNNING EFFECTIVELY IN SCHOOLS AND COMMUNITIES.**

- Actions have been taken to incorporate some monitoring activities into student's everyday life. For example, putting in place mechanisms to monitor the punctuality of teachers.
- A long-term barrier to maintaining engagement in monitoring activities across all youth is the prospect of migration for employment, further studies, and marriage (for female youth).
- Despite the desire to see the change in schools and in the community, there is little evidence of monitors integrating long-term mechanisms to monitor. There is no mechanism to track the activities of ex-monitors, and therefore it is difficult to understand to what extent they are continuing to engage in monitoring and the impact of this.

# **KEY RECOMMENDATIONS**

### **Some of the key recommendations are as follow:**

- Continuous training opportunities for monitors and teachers should be provided in addition to training of non-monitors to sustain interest. In addition to this, networking opportunities across different schools in both contexts will strengthen monitoring activities within schools and communities. This can be facilitated through exchange visits and sharing experiences with non-monitors.
- Continue involvement of media to engage youth and community members and authorities. This will help to highlight the monitoring activities undertaken by youth.
- Arrange with key stakeholders to increase community engagement and buy-in to the monitoring activities and Integrity Clubs. The local community needs to be sensitised on monitoring activities and the youth's role in these activities. This will help to build longer-term sustainability.
- Further, incentivise youth to attend Integrity Club programmes within schools and communities.
- Conduct further research on sexual harassment and abuse reported by female youth workers.

# INTRODUCTION

CERC is an independent non-governmental organisation that tackle corruption by training the community to act with integrity so that they are better placed to deal with corruption challenges; advocate for improved services, and ensure public funds are not wasted. These actions are aimed to empower the community voice, increase a government's accountability to its citizens, and result in an overall reduction in corruption.

Integrity Education programming in schools recognises that transformative change can only occur when young people are encouraged to act with integrity from an early age and are given the tools to do so. CERC select secondary schools to implement integrity Education and establish integrity clubs (ICs). These clubs hold regular meetings which enable students to discuss their experience of corruption and expand their understanding of the problem in context. From here, students become Young Integrity Builders and are better equipped to identify, raise, and monitor corruption issues.

Integrity Clubs are not an unusual concept and can be found in various countries and contexts. Integrity clubs often share essential characteristics, such as promoting active citizenship and democracy and fighting societal corruption. **However, CERC Integrity Clubs are unique as they combine learning about integrity with practising integrity.** This takes the form of the innovative idea of

monitoring. CERC applies behaviour changing tools and techniques to assist in designing programmes to encourage youth to act with and demand integrity. They look for evidence-based insights on the motivations and barriers to action.

The 4E approach to understanding and influencing behaviour is utilised – enable, encourage, engage, and exemplify:

- **ENABLE** – making it more accessible: removing barriers and ensuring the ability to act. This includes training local monitors, guaranteeing the availability of monitoring tools, and setting up Education Clusters.
- **ENCOURAGE** – provide incentives and disincentives: understand and offer the benefits to change. For example, a contractor's good performance is visible; positive stories of good service delivery are promoted; monitoring is socially awarded and more employable.
- **ENGAGE** – get people involved: involving people in communities early on to understand what they need to do – help them develop a sense of personal and community responsibility. This includes community media and events.
- **EXEMPLIFY** – demonstrating shared responsibility: authorities are institutionalising beneficiary feedback, contracting considers performance captured via EduCheck. Integrity Clubs are running effectively in schools and communities.

# RESEARCH OBJECTIVES

CERC has conducted a number of studies on their Integrity Club model in South Kivu, looking into effective delivery models and mapping the actors that need to be involved for successful implementation and community buy-in. However, youth is the key actor, and it is essential to understand what motivates and discourages them from the action. According to Integrity Clubs Fixi Score Survey(2021), students who act as monitors need to feel that they contribute to the political process or the community and that monitoring projects are their primary motivating factor for action and involvement. CERC has sought to get a deeper insight into the behaviour of young people, specifically what inspires them to become monitors and how other stakeholders contribute to them becoming or remaining monitors. With this in mind, CERC has conducted this study that will help to understand and influence local monitors' behaviour. The findings from the survey will be tested in CERC's programmes implemented in 2022 with the Education Out Loud funding support.

## SCOPE OF THE STUDY

The research focuses on South Kivu and Kinshasa, where CERC has a longstanding presence with local secondary schools. CERC is very active, and our work in these provinces is considered advanced in establishing Integrity Clubs in secondary schools.

## RESEARCH QUESTIONS

**The report focuses on addressing the following questions:**

- ☐ What are motivators, and what are barriers to becoming local monitors?
- ☐ What are possible incentives in getting them to monitor the quality of community projects delivery over 3 years?
- ☐ Who are the other important stakeholders in supporting youth monitoring?
- ☐ What kind of recognition is important to youth?

**The research specifically looks at 4 distinct groups of young people:**

- ☐ Young women and men who are members of Integrity Clubs.
- ☐ Young women and men attending secondary school education but who are not in the Integrity Clubs
- ☐ Young women and men who are attending university
- ☐ Young women and men who are not in secondary or university Education

# REVIEW OF LITERATURE

The summary of literature highlights that youth seek to have a personal connection to an issue or cause for them to participate in civic activities. Incentives have been identified as a motivator for civic engagement but are not the primary motivator for youth. Instead, youth are mainly motivated to civic engagement by the sense of belonging that it brings to them. The encouragement of friends and family has also been demonstrated as a key motivator to civic action. Once youth realise that their issues are shared amongst the group, they move towards a collective cause of action within their communities. Youth have observed the benefits of civic engagement to themselves, and skills are developed that they find useful for their future career prospects and as evidence of experience for college and university applications. They also observe positive character changes with increased confidence and leadership skills.

Barriers identified in the literature include the lack of opportunities available to youth to participate in civic engagement activities. The lack of opportunities is linked to resources available at schools and the deficit of inclusion of diverse students in civic engagement. Youth have also stated that they feel disempowered to act, as they fear the adults will not listen to their opinions.

Adults play a key role in youth civic engagement. Throughout the literature, it is highlighted that adults, communities and schools need to facilitate an encouraging environment for youth to participate in civic engagement activities, i.e., providing the youth with the resources to do so. The literature suggests adults create partnerships with youth and provide training and learning tools for youth to utilise.

# CONTEXT

DRC is a huge country in central Africa (with a surface area of 2.3 million km<sup>2</sup>), rich in natural resources. Despite an abundance of natural resource wealth, citizens in DRC face high levels of poverty. The population of DRC is 70 million, 40% of which lives in rural areas, 90% live on less than \$1.25 a day, and 9% of houses do not have electricity. It is ranked 175 out of 189 countries on the Human Development Index of the United Nations (UNDP, 2020).<sup>1</sup> According to the Corruption Perception Index of Transparency International, DRC is ranked at 170 out of 180 (2020).<sup>2</sup> DRC is an extremely fragile state that has experienced violent conflict for more than 20 years.

Centre de Recherche sur l'Anti-Corruption is an independent Congolese organisation working with local communities to build accountability and trust in Eastern Congo, focusing on women and youth. The organisation works with community monitors in South Kivu, the volatile region of eastern Congo, to ensure effective service delivery. It has contributed towards a positive change in governance as a result of adopting a collaborative approach when dealing with authorities and implementing agencies. CERC engages youth through the "Integrity Club" to identify and monitor education services.

In October 2017, CERC decided to establish 55 Integrity Clubs in 55 schools in South Kivu. CERC is already working on Education and governance. Integrity Clubs are composed of at least 15 members and two teachers. Students and teachers have a two-day training together. Subsequently, they meet every two weeks and start monitoring projects after three months. Due to limited access to the internet and technologies, they collect data on paper.

# METHODOLOGY

## DATA COLLECTION METHODS

Mixed methods were used to collect qualitative data and triangulate the findings. This included:

- **Participative workshops**
- **Key informant interviews**
- **Review of literature**

Each of the above is discussed in more detail below.

### PARTICIPATIVE WORKSHOP

To gather information from youth about what motivates them to act, workshops were conducted. They were designed to increase interaction and involvement from participants through sessions that were broken down through various activities guided by a set of questions. Two separate workshop formats were designed for monitors and non-monitors. The workshop format for monitors can be found in Annex.

The non-monitor workshop was adapted due to feedback from the data collection in South-Kivu, which noted that the original proposed workshop format was too complicated given the

time allocated. Therefore, the format was simplified to facilitate better quality data collection. This can be found in Annex 2.

The initial sampling framework aimed to conduct 40 focus groups in both provinces, with 15 participants each, totalling 600 students. Consideration of age groups and mixing monitors from different locations were prioritised. In Bukavu and Uvira, it was possible to meet 27 Integrity Clubs, totalling 373 students, and In Kinshasa, we met with 161 non-monitor students in 12 secondary schools without Integrity Clubs.

| PROVINCE          | NUMBER OF YOUTH PARTICIPANTS |            |            | NUMBER OF KEY STAKEHOLDERS |           |           |
|-------------------|------------------------------|------------|------------|----------------------------|-----------|-----------|
|                   | MALE                         | FEMALE     | TOTAL      | MALE                       | FEMALE    | TOTAL     |
| <b>SOUTH-KIVU</b> | 184                          | 189        | 373        | 42                         | 14        | 56        |
| <b>KINSHASA</b>   | 87                           | 74         | 161        | 24                         | 9         | 33        |
| <b>TOTAL</b>      | <b>271</b>                   | <b>263</b> | <b>534</b> | <b>66</b>                  | <b>23</b> | <b>89</b> |

The sampling framework with the total number of focus groups and participants, disaggregated by gender, can be found in Annex 4.

## KEY INFORMANT INTERVIEWS

To increase the success of Integrity Clubs, collaboration between different stakeholders is needed, including local authorities, parents, school management and managers of monitored projects. Therefore, it is important to include key informants involved in the monitoring process as

supporters or influencers in the analysis. There were 16 interviews in total.

Data collection instruments were developed and translated into French by the CERC staff, and data was collected in French to ensure that respondents' views were recorded accurately.

## LITERATURE REVIEW

Before the data analysis phase, a literature review of behaviour change theories was conducted. This enabled the findings from the field to be situated within behaviour change theories, to compare and contrast with similar research and to put the overall work in perspective.

The literature review was deliberately not done ahead of the data collection phase. This allowed CERC to remain neutral and avoid making assumptions about what they should see in the field. Indeed, the research is exploratory, i.e., it is not designed to test hypotheses

instead gather information and, based on this, generate views for testing later on during CERC's programme implementation in 2022/2025.

Google scholar was the search engine used to obtain articles for the literature review. The search terms used were "behaviour change communication in youth" and "what motivates youth towards civic engagement", "barriers to youth engagement", "community youth development". The key terms used included youth, civic engagement motivators, barriers, volunteer, and community.

## RESEARCH LIMITATIONS

Since the research was conducted at one point in time (i.e., cross-sectional study), it will not provide insight into the long-term impact and sustainability of the monitoring approach. Furthermore, as the research is bound to specific locations, generalising the findings to other project areas will not be appropriate unless the contextual factors are similar to those found in the research locations.

Furthermore, as discussed in the methodology section, in South-Kivu, there were only 23 active Integrity Clubs when the research was conducted, and only 4 groups of former monitors were included in the study. Additional challenges in organising logistics meant that engagement from the participants was more challenging as they did not have sufficient

information about the workshops in advance.

With the additional time differences and logistical constraints, conducting follow-ups with the participants was challenging in Kinshasa. Data was collected in the participants' mother tongue and facilitators (Lingala), so it is possible that some nuances in the data may have been missed during translation.

Finally, most of the articles used for background information were Western. There is limited research available on minority groups within civic engagement. Articles within a developing context were geared towards health behaviour change focusing on HIV/AIDS awareness and sexual reproductive health.

# DATA ANALYSIS

Data were analysed manually by independent consultants by going through the data presented. Three key categories have guided the analytical framework:

- 1. Motivating factors**
- 2. Inhibiting factors**
- 3. Removing barriers to action**

Recurrent themes have been identified, and different themes under each category have been explored. New themes that have emerged from the analysis have been included. The workshops that took place included ranking exercises, the results of which have been organised to reflect motivating and inhibiting factors to action.

# FINDINGS

The findings from the data collected and analysed are presented in this section.

The motivating factors and barriers identified from the data and mapped against the 4Es are given in Table 3. Findings related to each of these factors are discussed in detail below.

**TABLE 3: MOTIVATORS AND BARRIERS IDENTIFIED**

| POSTIVE FACTORS                              | ENABLE | ENCOURAGE | ENGAGE | EXEMPLIFY |
|----------------------------------------------|--------|-----------|--------|-----------|
| Agent of change                              | X      |           |        |           |
| Monetary compensation                        | X      |           |        |           |

| Engagement of stakeholders                   |        |           | X      |           |
| Other actors                                 |        |           | X      |           |
| <b>NEGATIVE FACTORS</b>                      |        |           |        |           |
| Fear                                         |        | X         |        |           |
| Inadequate training and communication        |        |           | X      |           |
| Lack of cooperation with monitoring projects |        |           | X      |           |
| Logistical barriers                          | X      |           |        |           |
| Lack of change                               |        | X         |        | X         |
| Non-payment of incentives                    |        |           |        |           |
| Discouragement by families                   |        | X         |        |           |
| Lack of tracking mechanism                   |        |           |        | X         |

# 1 ENABLE

## 1.1 AGENT OF CHANGE

**Both monitors and non-monitors had a comprehensive understanding of issues surrounding integrity and were able to provide numerous examples of scenarios of acting with or without integrity.**

The youth interviewed presented a wide range of examples as evidence of their understanding of integrity issues. These ranged from arguing with colleagues and drunkenness to theft, sexual assault, and killings. Some examples have been witnessed in their communities; others are examples they have heard through media reports. Interestingly, there were debates between the male and female respondents on the impact of these issues. The female respondents and 1 gave prostitution and a woman becoming pregnant outside of marriage the maximum ranking of 7 by the male respondents. The reasons cited by the respondents for the differences in ranking of pregnancy is the impact this has on a woman's life, including not being able to continue in school and being discriminated against and stigmatised in society. A motivational factor cited by all respondents was the

desire to be an agent of change. The youth want to see a change in their communities. One of the participants stated:

**"It is effortless because I have the desire to see things changed, I have freedom, and I am not afraid".**

A non-monitor interviewed cited the following reason for wanting to become a monitor:

**"I like to do things that benefit the community, and I will benefit from new knowledge".**

The literature reviewed highlighted that youth who are civically engaged within their community remain committed to their community and feel empowered to make the change.<sup>3</sup> Also emphasised, as a motivation, is the development of skills to be utilised in future career or study.<sup>4</sup>

change in a refugee community project. Health Education Research. 2011;27(5): 904-926. Available from <https://academic.oup.com/her/article/27/5/914/578734?searchresult=1> [Accessed October 30th, 2021].

## 1.2 MONETARY COMPENSATION

**There appears to be a lack of understanding of volunteerism, particularly in the more deprived areas.**

It was highlighted that volunteering and dedicating time for this is seen more as a job that should be remunerated for. This view is particularly apparent in areas with higher poverty levels and lower socio-economic status. When asked to rank the importance of monetary compensation, 6 out of 15 new monitors stated that this incentive was the most important motivating factor. In the former monitors in Bukavu group, the lack of incentives was particularly strong. not cost money.

There had been a complete absence of the CERC in the area, resulting in the monitors not receiving their compensation. This was a lack of respect for the monitors' commitment, further exacerbated by those living in impoverished areas (slums). The monitors were expected to pay for their transportation to the field, and so it was suggested that monitors should concentrate on their schools first as this would

## 1.3 PERSONAL DEVELOPMENT

**New monitors are keen to acquire new knowledge and develop their skills in project monitoring.**

In the same group of new monitors, nine responded that acquiring new knowledge and skills was their primary motivation for monitoring activities. Two interviewed teachers further supported this and elaborated that monitoring

activities help the students practice what they have studied in citizenship studies. The literature review supports the need for youth to learn about civic engagement and be given the opportunities to practise their skills.<sup>6,2</sup>

## 1.4 PRESTIGE AND MEMBERSHIP OF A CLUB

Fellow monitors can offer a support network that is motivating.

Existing and past monitors can provide a network and inspire others to

become monitors. For example, one person became a monitor because his brother had been one previously, demonstrating that family and peer influence is a strong factor in engaging

youth in monitoring. In a research study in California, the motivators and barriers to civic engagement were investigated amongst students. These youth became involved in civic activities in response to an invitation

from friends and classmates.<sup>2</sup> Similarly, the research study in Chicago with minority ethnic students demonstrated that their participation was because of encouragement from friends.<sup>5</sup>

## 1.5 LOGISTICAL BARRIERS

**Numerous complaints about logistical barriers were listed, including not having authorisation letters and a personal allowance for transport and food in the field.**

Although it may seem like a minor complaint, not eating when going to the field was raised throughout the workshops. This is because students go straight after school. It was further triangulated in an individual interview with a monitor, who stated:

**"I do not like going to monitor directly after school, as we come to school without eating".**

They also do not receive transport fees, which is an additional deterrent. Rain also affects monitoring visits because students do not have the appropriate attire for travelling in rain, which is a disincentive to making the visits.

The monitors do not have appropriate identification and letters of authorisation, which would aid them in accessing the information they require. An incentive to monitoring would be the

provision of letters, identification, and t-shirts to wear when going to the field. As youth progress into monitoring, the lack of identification and letters presents a demotivating factor to continue monitoring.

A group of former monitors provided some reasons and barriers for why they found monitoring difficult. Obstacles include the lack of personal allowance to be able to conduct activities. Time management with other commitments such as schoolwork is also a consideration to the students. When asked if youth and students with disabilities can equally participate in monitoring activities, a teacher described that these youths could attend meetings at the school level but are unable to travel to the field. Reportedly, there is a disabled monitor in one school; however, they cannot attend when there is a field visit.

## 2 ENCOURAGE

### 2.1 DISCOURAGEMENT BY FAMILY MEMBERS AND FRIENDS

The majority of parents actively discourage their children from participating in monitoring activities.

Parents of monitors believe that monitoring prevents their children from studying, negatively affecting their academic performance. Much of this is due to the lack of understanding of the role of monitors, few sensitisation activities and accountability not being a priority. The few parents who have attended a sensitisation session on Integrity Clubs are more likely to support their children in extracurricular activities such as monitoring. In support of this point, the literature reviewed notes the importance of the involvement of parents in motivating their children to become involved in civic activities.<sup>6</sup>

All the youth who attended workshops spoke of their parents being

disengaged in monitoring. They actively discourage them as they believe it affects their schooling and competing priorities, such as housework (particularly girls). This was further followed up in a key informant interview where the respondent had a similar experience with parents who had frequently told him that he would lose concentration on his studies. Furthermore, when students come into their final year of study, the pressure to perform in their final exams increases, so their parents are likely to be less supportive about their interaction with Integrity Club.

A further discouraging factor is the peers of the monitors. They question the amount of time monitors spend working and its impact on their schoolwork.

### 2.2 FEAR

The political environment in which the youth are operating is dangerous and sensitive. Youth often experience a lack of freedom for self-expression, and being a monitor is deemed risky. The threat of sexual harassment and

assault is greater for female monitors; however, physical assault and arrest are more significant for male monitors. Fear of physical threat was reported as a common obstacle to acting on integrity issues. This includes,

particularly for non-monitors at university, fear of being arrested, tortured, or murdered. The media reports news on the arrests and kidnaps of members of whistle-blowing youth movements who are demanding accountability.

In a research study on undocumented Mexican youth living in America, the common fear felt was deportation.<sup>6</sup> However, the research concluded that regardless of their concerns about deportation, the participants had high levels of civic engagement.

Based on encouraging and discouraging factors, students took part in an exercise where they placed themselves on a scale according to whether they found the work exciting or intimidating. Out of a group of 15 non-monitors in Bukavu, 14 were excited about the prospect of carrying out monitoring work. Interestingly, the university students felt less excited and more intimidated by the prospect of carrying out monitoring work. There was also a gender difference, whereby the male respondents suggested that

the female respondents have less of a sense of risk, as they (male monitors) are less likely to be arrested and tortured. The female respondents indicated that male members benefit from corruption in society and are less likely to be agents of change.

Female monitors described sexual harassment when monitoring projects. There are reports of project staff expecting sexual relations in exchange for the information they provide on the project and fellow monitors harassing them on monitoring visits. The configuration of the workshops and the sensitive nature of the subject area meant that extracting further information on sexual harassment and assault was challenging; however, the information provided by a headteacher further triangulated this finding. Socio-economic status further compounds the risk. Those living in poverty, or those that are illiterate, face more challenges in monitoring, and they are likely to be more vulnerable. The literature states that opportunities for youth engagement differed based on socio-economic status.<sup>6</sup>

## 2.3 LACK OF CHANGE

Although a strong motivating factor to youth becoming monitors is to be an agent of change within the community, the challenges faced in working against societal norms of corruption can discourage them from continuing to monitor.

The youth feel discouraged by their society and the levels of corruption present. A non-monitor in Bukavu stated that:

**“Everybody is involved in corruption; we lack models”.**

This perception acts as a demotivating factor to the youth. Students report that they need changes in the societal structure the behaviour of their leaders and authorities.

Corruption is considered to be very prevalent across all levels of society. This poses a doubly faceted barrier to the motivation of monitors. On an individual basis, monitors feel disheartened and unable to impact society and therefore believe that they cannot make a difference. They are met with reluctance from community members who ask them, 'Do you think you will change this country?' This further disenchant the monitors and demotivates them from continuing their activities.

The two groups of monitors interviewed in Bukavu could not provide examples of successes in their monitoring activities. The lack of success stories is a demotivating factor to monitors and is strongly linked with low community recognition, further demotivating the youth.

## 3 ENGAGE

### 3.1 LACK OF COOPERATION WITH MONITORING EDUCATION SERVICES AND PROJECTS

**A commonly reported theme amongst all monitors interviewed is the lack of engagement with education services, projects staff, and local authorities.**

The youth find it difficult to obtain information about the education services and projects they are supposed to be monitoring and cite the

lack of recognition as a significant barrier. In addition, they do not have appropriate identification and letters of authorisation, which would aid them in accessing the information they require.

An incentive to monitoring would be the provision of letters, identification, and t-shirts to wear when going to the field.

Monitors also feel devalued when they arrive in the field, and the appointments with the community project staff are unsuccessful because they are not available. Another group of monitors in Bukavu noted that they struggle to obtain information from community project staff.

All the monitors interviewed stated that the lack of available information and the low willingness of project staff to provide information have made

monitoring difficult. This is related to the lack of buy-in from project staff and is further compounded by not having identification and letters of authority.

Teachers also highlighted that there is weak support from local authorities and that they and project staff are the most discouraging to students. For this reason, it has been complicated for monitors to carry out their activities and witness results. A comparison between the materialisation of expectations of monitors and non-monitors is therefore unobtainable.

### 3.2 INADEQUATE TRAINING AND COMMUNICATION WITH CERC

**A typical response highlighted the lack of identification for monitors and insufficient training.**

Former monitors had received a two-day training on citizenship and the definition of integrity but were informed that they needed refresher training. There were mixed positive and negative responses when asked about stakeholders that influence the youth.

CERC Project Coordinator (particularly in Bukavu) was praised for his encouragement and described as an influential figure to the youth, encouraging them to continue to monitor. However, deeper underlying factors influence the level of support

that CERC can give. CERC does not have an active sub-office in Bukavu, and therefore, the training and support are centralised in their headquarter in Kinshasa, meaning that this can be difficult to access. Similarly, in Uvira, a total absence of consent was reported. CERC does not have a sub-office in Uvira since the end of the NORAD-funded Integrity Clubs project in South Kivu. Although they have recruited project staff, there have been no project visits to the 27 schools visited in Bukavu and Uvira in over a year.

None of the monitors agreed that they had received sufficient training. The monitor interviewed individually had received one training session with no follow-ups. In a different school, one module was distributed; however, monitors did not receive it. A teacher interviewed also confirmed that the training had been insufficient and would recommend that it increase from one day to three days and increase the number of modules covered with more supporting documents.

CERC staff face some challenges. At the beginning of the programme, a target

of 140 schools had been planned to be monitored. However, this target proved very ambitious. Requests for letters of authorisation meant that they had to work with more flexible schools that would allow them to work without a ministry of education letter. They highlighted that remote management of partnerships had been another challenge, resulting in long periods passing between engagements with schools. This has resulted in recruited project staff feeling abandoned and questions arising from teachers and youth regarding CERC's whereabouts.

### 3.3 ENGAGEMENT OF STAKEHOLDERS

**Teachers who accompany the monitors are seen as the most significant influencers of support and encouragement.**

Fourteen monitors groups noted that they found teachers' messages of encouragement, sensitisations, and courage motivating. Similarly, the headteachers who have accepted the Integrity Club initiative positively influence students. Additionally, a current monitor acknowledged the support provided to him by a teacher

accompanying the monitors. He is also grateful for the headteacher allowing activities to be organised. This result aligns with the findings from the literature reviewed; for a better environment for change to occur within the community, youth and adults need to collaborate.

### 3.4 OTHER ACTORS

**Non-monitors are aware of monitoring in the community and give examples of the actors working in this field.**

There is evidence of other actors working within this sphere. This includes

journalists, police, youth groups, churches, teachers, human rights

activists, artists, and poets. Two youth groups were mentioned specifically: FILIMBI and LUCHA, both nationwide youth groups with multiple branches. There are no links between CERC and the youth groups. Interestingly the youth included the police when discussing stakeholders, although there is a perception that police are also guilty of acting without integrity through their involvement in corruption

and bribery. Artists and poets perform through songs, poetry and artwork that denounce acts that lack integrity. Although these various stakeholders exist, there are no connections between CERC and these other actors. A perception amongst the non-monitors of these actors is that they are at risk of being arrested, killed, or co-opted by politicians.

## 4 EXEMPLIFY

Although there is a willingness to see the change in the community, and this is the main driving factor behind the desire to become monitors, the slow rate of change is a significant barrier to students continuing to monitor. There are also no tracking mechanisms to evidence students' continued monitoring.

Secondary school students become disinterested as they face resistance and indifference from local authorities, teachers, and community members. To overcome this, schools and communities need to encourage youth to make positive changes.

There is an impetus present within youth to want to monitor projects, although the barriers to participation can outweigh the motivation. A monitor who has been active since October

2017 has participated in monitoring one project twice.

Teachers were asked if students who had previously been monitors continued their activities. They were unable to answer as there is no mechanism for tracking this. Nonetheless, they did note that students in their final year of study were more likely to drop out of monitoring activities due to the focus on their schoolwork.

The lack of a tracking mechanism to monitor ex-monitors and any activities they may be conducting also extends to community monitors. Ex-monitors may have moved on but are still partaking in monitoring activities; however, currently, these cannot be tracked.

# CONCLUSION

**ENABLE:** Youth want to be agents of change within their schools and communities; they see the importance of integrity and want to reduce corruption, killing and thefts in their society.

The respondents stated that the opportunity for personal development was a motivating factor; teachers noticed this and said that being members of Integrity Clubs had enabled students to practice what they had learnt in classes.

Monetary compensation is a strong motivator for taking part in monitoring activities. In some of the study areas, poverty levels are very high, so the desire for monetary compensation was higher; however, these respondents considered monitoring as more of a job rather than as volunteerism.

The most significant barrier to monitoring is fear; youth are scared of becoming targets for their work. Their concerns relate to being arrested, murdered, or kidnapped, further compounded by news stories they have heard from youth groups. Fear is a greater barrier to more significant respondents, such as university students. This is because they are more aware of events taking place around them and their levels of maturity. For female respondents, there are concerns from both project managers and fellow monitors about being targets of sexual harassment and abuse during their monitoring visits.

**ENCOURAGE:** Focal teachers were said to be a supportive influence to monitors in schools. They support the students on monitoring visits and provide students with messages of encouragement, sensitisation, and courage.

There is a lack of support from CERC, which is a demotivating factor. The CERC office is far from the programme areas making partner visits difficult. However, it results in few training opportunities and a lack of support for monitors and focal teachers.

This lack of partner support links to some of the logistical challenges that were highlighted in the study. There is a lack of transport and provision of transportation for field visits, resulting in longer visits, which further impacts students' schoolwork. Students are concerned about not eating when they visit the field, as they go directly after school. Although these factors can be considered small barriers, their impact on the students' desire to monitor integrity is great.

**ENGAGE:** The time that monitoring takes is extensively considered to the student and their families. There is little family support for monitoring activities, and this decreases further as students reach their final school years. There have been very few sensitisation activities conducted around integrity and the concept of monitoring to community and family members; however, when families attended a sensitisation session, they were more likely to support monitoring activities.

**EXEMPLIFY:** Despite the desire to see the change in schools and in the community, there is little evidence of monitors integrating long-term mechanisms to monitor. There is no mechanism to track the activities of ex-monitors, and therefore it is difficult to understand to what extent they are continuing to engage in monitoring and the impact of this.

# ANNEXE 1

## WORKSHOP FORMAT FOR MONITORS OR EX-MONITORS

Duration: 3.25 hours

Number of participants: 15

Format: Participants will be divided into groups and guided by a set of activities designed to answer the main research questions. Considering the age groups of participants, an interactive workshop is preferable to plenary sessions. The workshop will be highly interactive to encourage participation, including warm-up activities, games, and role-play.

Whenever the group is divided into two or three groups, the facilitator will ensure that groups are mixed gender to maintain gender balance. The activities are designed in a way that will allow the facilitator and researchers to triangulate findings. Therefore, the themes are repeated to some extent, from one part to another. Participants will be required to record their answers or activity output in a suitable format (e.g., flip charts, notes), which will allow the facilitator to focus on encouraging engagement and to observe emerging themes that require further investigation, e.g., as a follow-up interview. At the end of the workshop, participants will be given a chance to share anything else they have in mind in a confidential form. This will allow us to capture participants' voices that might have been reluctant to share in front of others. The output from the workshop will be used as the basis of the analysis.

There will be four parts to the workshop. The first three will be focused on activities designed to learn the motivating and discouraging factors of youth to act as monitors, including the influence of other stakeholders. The aim is to uncover the perceptions of monitors about their role and their experiences interacting with others as monitors. The last part will be dedicated to a summary exercise, asking participants to note the motivating and inhibiting factors, providing an opportunity to reflect on all the factors raised during the day and rank them.

## PART 1: AWARENESS AND PERCEPTIONS

Uncovering individual perceptions: the first part is designed to provide insight into participants' own experiences as monitors: what do they like the most about it? What do they like the least? What is important for them as monitors? What made them want to become monitors?

Optional warm-up activity- Graffiti wall: This tool involves participants decorating a wall by writing or drawing all of their opinions, feelings, and ideas about monitoring.

How to use it:

- 1 Graffiti walls work well with large groups of young people, but adults can do them.
- 2 Get participants to cover a whole/part of a wall with flipchart paper.
- 3 Distribute drawing and painting materials to participants.
- 4 Ask them to identify a topic they would like to express their thoughts, feelings and opinions about, then just let them express anything they want on the wall.
- 5 When complete, discuss what the graffiti wall means to them

**Activity 1:** Participants are divided into three groups. They are asked to imagine they need to recruit fellow monitors. How would they advertise the role of a monitor?

**Activity 2:** Participants are now asked to imagine interviewing candidates for monitors. The candidate asks them to share the negative aspects, such as challenges or difficulties they have faced.

The combination of activities 1 and 2 will ensure we uncover both positive and negative aspects.

## PART 2: MOTIVATION AND SUPPORT

The second part of the workshop will focus on understanding the factors that motivate youth to act and their support. This will be done through inquiring about the successes and challenges of being a monitor, with particular attention to how challenges were addressed or how they could be addressed. In this part, the facilitator will be required to probe participants to understand how barriers to being monitors can be removed.

Activity 3: Participants are divided into two groups, one represents success, and the other represents barriers to action. They are asked to share their accomplishments as monitors/barriers to become monitors or continue monitoring (at least one per person) and record it. They then review the list as a group and decide on one success/challenge

to present in the form of acting the situation to the other group. The audience group observes and records what was optimistic about the scenario presented and vice versa.

Activity 4: Discussion in plenary about overcoming challenges.

- Facilitator to do much probing to understand what helps remove barriers.
- It is expected that there will be some degree of repetition between parts 1 and 2, but this is done deliberately to triangulate findings.

### **PART 3: UNDERSTANDING INFLUENCE**

This part aims to provide insight into the people that influence monitors, such as role models, community members, managers of monitored projects, family members etc.

Activity 5: Participants are asked to reflect on parts 1 and 2 and identify the stakeholders involved or connected to what they like/dislike about being monitors, their successes, challenges, and overcoming challenges.

The facilitator may ask additional guiding questions such as how this person impacts. The facilitator will take notes of the discussion and nominate another note-taker.

Suggested activity format: Using a spider web tool. The tool involves participants drawing a diagram as a spider to identify the problems or opportunities related to their chosen stakeholder.

#### **How to use it:**

- 1** Spider diagrams work best with groups of up to eight people.
- 2** Draw a spider's body in the middle of the diagram. Draw or write the subject in the centre of the spider's body.
- 3** Encourage the participants to discuss the problems or opportunities that affect the subject.
- 4** Ask the participants to draw the legs of the spider and, at the end of each leg, to draw or write one of the problems or opportunities.
- 5** Encourage the participants to keep going until they have identified all possible problems or opportunities.
- 6** Discuss what the diagram shows. For example, how many problems or opportunities are there? Which issues or opportunities are easier or harder to address? What type of action could be taken? Who should act? Participants can also mark these on the diagram if they like.

## PART 4: SUMMARISING AND RANKING

The activities in parts 1–3 allow participants to think creatively and provide an open forum for discussion and interaction. The final session is designed to bring these previous findings together and summarise them to give a clear indication of the motivation and discouraging factors youth face and their relative importance.

Activity 6: 'World café' activity. Participants are divided into two groups. One group is tasked with writing down (on a flip chart) the motivating factors, and the other group will be writing the discouraging factors. They then swap groups and are invited to add things to the other group's list. The groups then come together and decide on the top five factors (i.e., the most important or influencing) in each list. Each participant is given ten stickers or stones and is asked to rank the top five as s/he sees fit. (E.g., two per factor, five on a very important factor, or however they wish, as long as they do not exceed ten marks). The facilitator counts and notes the scores per factor. Now the facilitator aims to establish when throughout the monitoring process, the youth felt motivated by drawing a timeline and asking them to indicate the time (e.g., after the training, after a few months when they started their work, after achieving a 'Fix'). If further discussion arises from this activity note-taker will be assigned.

**Activity 7 (+ongoing):** Participants are given a sheet of paper, asking them to share any other experiences they have anonymously.

- Throughout the workshop, if the facilitator senses that there is much to explore or discuss in relation to any topic, which will compromise the workshop's timekeeping, he can remind participants to record additional reflections in the dedicated sheet, either in the end or during the day.
- Follow up interviews to be scheduled by the facilitator at the end of the workshop

## WORKSHOP SCHEDULE AND DURATION OF ACTIVITIES

| SECTION | ACTIVITY         | BREAKDOWN      | DURATION                              |

# ANNEXE 2

## WORKSHOP FORMAT FOR NON-MONITORS

Duration: 3.25 hours (or less)

Note: non-monitors workshops will be conducted after the 'monitors' workshop so that findings from the "non-monitors" workshop can be used to base some of the discussions and activities.

**Number of participants:** 15

**Format:** The workshop's format targeting non-monitors will be similar to the monitors' workshop. There will be four parts, following the same structure and rationale of the monitor workshop, but will include an introduction to the concept of monitoring and the overall goal of the monitoring model (i.e., demanding and acting with integrity in society).

When looking at the motivating and inhibiting factors of non-monitors to act, it is essential first to familiarise participants with the concepts of Integrity Clubs. To do that, we will use the Integrity Clubs Manual Outline.

### PART 1: INTRODUCTION TO INTEGRITY AND MONITORING

This part aims to familiarise participants with the ideas behind Integrity Clubs and monitoring to create a basis for the discussion.

**Activity 1:** As per the training manual, an introduction to what integrity means will be given, as well Integrity club and the role of monitors. The Project staff will deliver the introduction, as they are well familiar with the concepts

#### Activity 2:

- 2.1** The Project staff present examples and scenarios of acting with or without integrity.
- 2.2** Participants are asked to think of examples from their own lives and communities, of scenarios of acting without integrity and to write them (big) on a piece of A4 paper.

- 2.3** The facilitator gathers the examples and stick to the wall/table/floor. As a group, participant rank the examples from 1 to 5, where 1 is 'not very bad' and 5 is 'extremely bad'. The facilitator encourages debate and conversation on the examples and the rank.
- 2.4** To triangulate the findings from 2.3- the facilitator now asks, which of these situations would you choose to address and why?

Suggestion to offer a break after Part 1

## PART 2: AWARENESS AND PERCEPTIONS

Uncovering individual perceptions: this part is designed to provide insight into participant's perception about monitoring and monitors: what do they think they represent, what qualities they should have?

**Activity 3:** Participants are divided into two groups. They are asked to think of the scenarios presented in part 1 and imagine that they would like to fix the situation. What qualities, roles, and behaviours should they have? They then switch between the groups and review the similarities and differences between each other's lists.

**Activity 4:** Project staff now present the concept of monitoring to the group and explain the activities that monitors do daily. They then ask participants for their reactions- is this new to them? Does it surprising that this initiative exists? Is it in line with their expectations from the role?

## PART 3: MOTIVATION AND SUPPORT

The third part of the workshop will focus on understanding the factors that motivate youth to act. This will be done by sharing the realities of monitors' work with participants and exploring their reactions.

**Activity 5:** The facilitator shares examples from the 'advertisement activity' (including the challenges) or the 'motivating and discouraging factors' shared by monitors groups.

Participants are asked to position themselves on a scale of exciting/intimidating to monitor success and challenges and explain why they feel this way. The facilitator will mark a line on the ground and state that one end means 'exciting' and the other end means 'intimidating'. He will then ask the group to stand on the line according to how 'excited' or 'intimidated' they would feel about it.

**Activity 6:** The activity is focused on overcoming barriers. The Project staff will share short stories that describe a barrier, and the participants will be asked to react to them (individually or in pairs) and then present in plenary. Stories should present typical work scenarios as a monitor and test how non-monitors would react – would it discourage them? Why/why not? How would they feel? Would they seek help? If so, where?

**Activity 7:** Participants are now asked to brainstorm and record what they think they would enjoy vs. not enjoy being a monitor and why.

## PART 4: SUMMARISING AND RANKING

The activities in parts 1–3 allow participants to think creatively and provide an open forum for discussion and interaction. The final session is designed to bring these previous findings together and summarise them to give a clear indication of the motivation and discouraging factors youth face and their relative importance.

**Activity 8:** 'World café' activity. Participants are asked to reflect on everything discussed in the day and think of what factors would motivate them to become monitors and what would discourage them from doing so or be a barrier in their way to becoming monitors?

They are then divided into two groups. One group is tasked with writing down (on a flip chart) all the motivating factors, and the other group will be writing the discouraging factors/ barriers. They then swap groups and are invited to add things to the other group's list. The groups then come together and decide on the top five factors (i.e., the most important or influencing) in each list. Each participant is given ten stickers or stones and is asked to rank the top five as s/he sees fit. (E.g., two per factor, five on a very important factor, or however they wish, as long as they do not exceed ten marks). The facilitator counts and notes the scores per factor. If further discussion arises from this activity, a note-taker will be assigned.

Note: If you have feedback from monitors, you could use raised issues during this workshop. Write up all issues (positive/negative) on individual pieces of paper and have this group rank them from most important to the least important.

**Activity 9 (+ongoing):** Participants are given a sheet of paper, asking them to share any other ideas they have anonymously.

- Throughout the workshop, if the facilitator senses that there is much to explore or discuss in relation to any topic, which will compromise the workshop's timekeeping, he can remind participants to record additional reflections in the dedicated sheet, either in the end or during the day.

**Follow up interviews to be scheduled by the facilitator at the end of the workshop**

**Timings:**
